Enterprise Java (EJ)

Roll No.: T013	Name: Saqlain Khan
Class: TYIT	Batch: 1
Date of Assignment: 01-08-2026	Date/Time of Submission: 01-08-2026

PRACTICAL 5

AIM :- Implement the following JSP JSTL and EL Applications.

- A) Create an html page with fields, eno, name, age, designation, salary. Now submit this data to a JSP page which will update the employee table of the database with matching eno.

CODE :-

Index.html :-

```
<!DOCTYPE html>

<html>

<head>

<title>Update Employee</title>

</head>

<body>

<h2>Update Employee Details</h2>

<form action="update.jsp" method="post">

Employee No :

<input type="text" name="eno"><br><br>

Name :

<input type="text" name="name"><br><br>

Age :

<input type="number" name="age"><br><br>
```

Designation :

```
<input type="text" name="designation"><br><br>
```

Salary :

```
<input type="number" name="salary"><br><br>
```

```
<input type="submit" value="Update">
```

```
</form>
```

```
</body>
```

```
</html>
```

Update.jsp :-

```
<%@ page import="java.sql.*" %>
```

```
<%
```

```
String eno = request.getParameter("eno");
```

```
String name = request.getParameter("name");
```

```
String age = request.getParameter("age");
```

```
String designation = request.getParameter("designation");
```

```
String salary = request.getParameter("salary");
```

```
try
```

```
{
```

```
    Class.forName("com.mysql.jdbc.Driver");
```

```
    Connection con = DriverManager.getConnection(
```

```
        "jdbc:mysql://localhost:3306/company",
```

```
        "root",
```

```
        "root");
```

```
    PreparedStatement ps = con.prepareStatement(
```

```
"UPDATE employee SET name=?, age=?, designation=?, salary=? WHERE  
eno=?");
```

```
ps.setString(1, name);
```

```
ps.setInt(2, Integer.parseInt(age));
```

```
ps.setString(3, designation);
```

```
ps.setDouble(4, Double.parseDouble(salary));
```

```
ps.setInt(5, Integer.parseInt(eno));
```

```
int i = ps.executeUpdate();
```

```
if(i>0)
```

```
    out.println("<h2>Employee Updated Successfully!</h2>");
```

```
else
```

```
    out.println("<h2>Employee Number Not Found!</h2>");
```

```
con.close();
```

```
}
```

```
catch(Exception e)
```

```
{
```

```
    out.println(e);
```

```
}
```

```
%>
```

OUTPUT :-

Update Employee Details

Employee No :

Name :

Age :

Designation :

Salary :

Employee Updated Successfully!

```
mysql> SELECT * FROM employee;
+-----+-----+-----+-----+-----+
| eno | name      | age | designation      | salary |
+-----+-----+-----+-----+-----+
| 101 | Saqlain Khan | 20 | Software Developer | 40000  |
| 102 | Reze       | 20 | My Wife          | 40001  |
+-----+-----+-----+-----+-----+
2 rows in set (0.00 sec)
```

B) Create a JSP page to demonstrate the use of Expression language.

CODE :-

Expression.jsp :-

```
<%@page contentType="text/html" pageEncoding="ISO-8859-1"%>
```

```
<!DOCTYPE html>
```

```
<html>
```

```
<head>
```

```
<meta charset="ISO-8859-1">
```

```
<title>JSP Expression Language</title>
```

```
</head>
```

```
<body>
```

```
<h2>JSP Expression Language Demo</h2>
```

```
Expression 1 (Addition): ${12 + 2} <br><br>
```

```
Expression 2 (Subtraction): ${20 - 5} <br><br>
```

```
Expression 3 (Multiplication): ${8 * 4} <br><br>
```

```
Expression 4 (Division): ${40 / 5} <br><br>
```

```
Expression 5 (Comparison): ${15 > 10} <br><br>
```

```
</body>
```

```
</html>
```

index.html :-

```
<!DOCTYPE html>

<html>

<head>

    <meta http-equiv="refresh" content="0;URL=newjsp.jsp">

</head>

<body>

</body>

</html>
```

OUTPUT :-

JSP Expression Language Demo

Expression 1 (Addition): 14

Expression 2 (Subtraction): 15

Expression 3 (Multiplication): 32

Expression 4 (Division): 8.0

Expression 5 (Comparison): true

C) Create a JSP application to demonstrate the use of JSTL.

CODE :-

New.jsp :-

```
<%@ taglib prefix="c" uri="http://java.sun.com/jsp/jstl/core" %>

<%@page contentType="text/html" pageEncoding="UTF-8"%>

<!DOCTYPE html>

<html>

<head>

    <meta http-equiv="Content-Type" content="text/html; charset=UTF-8">
```

```
<title>Core Tag Example</title>

</head>

<body>

<c:forEach var = "j" begin="5" end="15">

Item <c:out value = "${j}" /><p>

</c:forEach>

</body>

</html>
```

OUTPUT :-

```
Item 5
Item 6
Item 7
Item 8
Item 9
Item 10
Item 11
Item 12
Item 13
Item 14
Item 15
```
